Vertical Tie-Down System

Hot-Dip Galvanized Vertical Rods and steel plates at the bottom and steel angle at the top may be bolted together for specific needs where retaining walls require a vertical tie down.

Note: In these applications the blocks are modified by using a ZERO setback per block with 6 ¾" diameter knobs and adding 6" diameter holes to accommodate the vertical rods, in each block.

NOTE: Groove is moved 2" back or use 6¾" diameter knobs so blocks stack vertically.

Groove moved back 2" or use 6¾" diameter knobs
